

## Wallace State Park

### DEER RUN TRAIL

This heavily wooded trail features Deer Run Loop and Deer Creek Loop. Beginning on the Deer Run Loop, the trail makes a low water crossing before climbing a steep incline. The hillside, covered with oak and hickory trees, is a favorite roosting site for turkey vultures. As the trail starts to level out, hikers will come to a white connector trail (WC2) that will reduce the hike to about one mile. Hikers choosing to stay on the Deer Run Loop through the rolling wooded hills will see deep ravines and several footbridges before reaching the southern boundary of the park. This area has younger trees and a more open feel because it was once farmland. Along the trail, hikers will come to two old farm ponds. At the second pond, hikers may choose to continue on the Deer Run Loop or take the Deer Creek Loop through more scenic bottomland area. The Deer Creek Loop follows the steep banks of this meandering creek. Hikers can expect to see small sand bars, small fish and amphibians, woodland birds, and numerous deer tracks before rejoining Deer Run Loop. The trail continues along a ridge in the woods providing wildlife viewing opportunities as it meanders its way back to Lake Allaman. White connector 1 connects to Old Quarry Trail.

**Distance:** 3.1 Miles

**Uses:**

Hiking 

**Blazes:**

Blue 

Red 

White 2 

**Class:** Multi-loop

**Surface Type:** Natural

**Trail Rating:** Rugged

**Estimated Hiking Time:** 3 Hours, 8 Minutes

**Trailhead & GPS Location:**

39.65553, -94.21545

**Elevation profile is not available**

**You may experience:**

- 2) Natural Surface-dirt/mud/gravel, shifting rock, slippery surface, etc.
- 3) Rocks, roots and/or downed vegetation on trail
- 6) Wood or stone steps
- 7) Steep grades and inclines more than 10%
- 9) Bridges and/or structural crossings
- 10) Water/stream crossings without bridges
- 11) Occasional water over trail

## Wallace State Park

### OLD QUARRY TRAIL

Old Quarry Trail begins on the boardwalk with excellent views of the lake and western sky. The trail passes across the footbridge in the backwater of the lake, crosses the main road and begins a steep incline before gradually becoming level. Along the trail, hikers will come to a natural limestone outcropping that has been quarried. The history is unknown but perhaps an early resident of the area used the rocks for building materials. Past the quarry, the trail exits the woods into an open field that was once farmland. The land is in transition with many new plants and trees growing since farming ended in the 1980s. A spur trail and white connector 3 (WC3) lead to the special-use area along the edge of the open field and through a stand of Scotch and shortleaf pine trees planted in the 1950s. White connector 1 (WC1) provides a connection to additional park trails.

**Distance:** 1.1 Miles

## Wallace State Park

### ROCKY FORD TRAIL

On Rocky Ford Trail, a long, gentle slope leads down through the oak trees toward Deer Creek. In the spring, expect to see a multitude of wildflowers including spring beauty and Dutchman's breeches. As the trail reaches the creek, it narrows and may be muddy or flooded following heavy rains. The trail name, Rocky Ford, describes the series of limestone shelves that cross the creek. This ford may have been a crossing on the Mormon Trail more than 150 years ago. Today it is a favorite spot for visitors to take pictures and play in the creek. Large sycamore and cottonwood trees are mixed in among the oaks along with poison ivy and stinging nettle. The trail eventually joins Deer Run Trail and ends at the Lake Allaman spillway.

## Wallace State Park

### SKUNK HOLLOW TRAIL

Skunk Hollow Trail has a gentle grade that takes hikers between wooded hillsides. Along the trail, an intermittent stream can produce a small waterfall. The path crosses several footbridges and the main park road as it encircles Campground 4. Skunk Hollow Trail provides access points for campgrounds 2 and 4 (WC5 and WC6), which are blazed in white. An access to Campground 1, also blazed in white (WC4), is located at the spillway footbridge before entering the trail. The trail shares a trailhead and a section with Deer Run Trail. White connector 1 (WC1) connects to Old Quarry Trail to increase the length of the hike.

## TRAIL BLAZE COLORS & SURFACE TYPES

The maps on this website indicate the blaze colors for each trail. If more than one trail shares tread, that portion of the trail is identified by more than one color. The surface type of a trail is indicated on the maps generated by this website by a pattern overlapping the blaze color of the trail.

## TRAIL TYPE – Loop, Multi-loop, One Way, System or Multi-section

A **loop** trail is one that will return you to the trailhead. **Multi-loop** trails offer two or more separate loops, ex. a trail having a north and south loop. A **one-way** trail takes you from the trailhead to the farthest point on the trail and you will have to retrace your steps to return to the trailhead. If you plan to return to your starting point on a one-way trail, you will have to double the distance to calculate your estimated mileage and/or hiking time.

A **trail system** is a series of interconnected trails that allow you to choose your own route.

A **Multi-section** trail offers two or more separate sections, ex. Katy Trail State Park, and distances are shown both for the entire trail and the sections.

## YOU MAY EXPERIENCE

These conditions are all things you may encounter while on a Missouri state parks trail. Trailhead signs at the start of each trail also indicate which conditions exist on that trail.

- 1 Slippery conditions and/or downed vegetation
- 2 Natural surface: dirt, mud, gravel, shifting rocks, slippery surface, etc.
- 3 Rocks, roots and/or downed vegetation on trail
- 4 Low-hanging vegetation
- 5 Physically challenging obstacles
- 6 Wood or stone steps
- 7 Steep grades and inclines over 10%
- 8 Bluffs or drop-offs next to trail
- 9 Bridges and/or structural crossings
- 10 Water/stream crossings without bridges
- 11 Occasional water over trail
- 12 Road/Highway crossing
- 13 Emergency response signs
- 14 Narrow passages
- 15 Raised or protruding obstacles
- 16 Electric fence crossings
- 17 Bison/elk
- 18 Rapidly changing weather conditions
- 19 Motorized boat traffic
- 20 Unexpected waves
- 21 Changing water levels
- 22 Surface or submerged objects

## ESTIMATED HIKING TIME

The estimated hiking time was determined by considering the average user's speed and the conditions that might be experienced on a specific trail. Your speed may be slower or faster than the time listed.

## GPS COORDINATES

There are several methods of communicating GPS coordinates. Most GPS units will convert from one coordinate system to another. If you require a different coordinate system for your unit, visit [dnr.mo.gov/gisutils/](http://dnr.mo.gov/gisutils/) to convert the coordinates shown on this map to another version.

## NATURAL AREAS / WILD AREAS

**Natural areas** are identified in pink. Natural areas are recognized as the best remaining examples known of Missouri's original natural environments. These natural areas are managed and protected for their scientific, educational and historical values. Missouri state parks have 38 designated natural areas, encompassing almost 22,000 acres.

**Wild areas** are identified in brown. The Missouri Wild Area System is made up of large tracts of land set aside as wilderness, which make the perfect setting for hiking and backpacking. A wild area must be 1,000 or more acres in size, show little impact from humans, and possess outstanding opportunities for solitude. They are strictly protected for their wilderness benefits as well as for their use for environmental education and scientific study.
